

PROMO TODAY™

*Technological evolution brings us the ReadyCharge™ cable
Its compatibility gets the job done*

Charging cords tend to be long, inconvenient to store, and are often a hassle because they get tangled with other cables. Not to mention they tend to be misplaced or forgotten due to each device's different charging requirements.

Here at All-In-One® we have innovated beyond the issue of cumbersome cables by developing our ReadyCharge™ cable. This portable charging cable is attached to a key ring, making it easy to transport and ready at a moment's notice. The cable attaches to and detaches from the key ring with a magnetic closure. This feature allows the ReadyCharge™ to attach to any set of keys or desired accessory. Moreover, the cable is manufactured to endure the heavy use that your key chains and other accessories undergo daily.

All-In-One® is sensitive to the array of inputs required in charging your many devices. With this in mind, we created our specially designed 2-in-1 (Lightning & Micro-USB) ReadyCharge™, which allows you to charge an Android device, and afterwards *flip* the connector to charge an iPhone device—using the same cable! Our other ReadyCharge™ options include USB to USB-C, USB to Micro-USB, and USB to Lightning cables.

With ReadyCharge™, you can forget about those drawers full of tangled old cables and stop worrying about being without a charge! Visit our website to get a quote and your free virtual today!

The ReadyCharge™ Portable Charging Cable and Key Ring comes in various colors such as white, black, blue, and lime green. Both the outside and the inside of the cable input can be imprinted to showcase your customer's brand. The cable comes packaged in a clear clamshell with a standard or optional customizable insert card. Additionally, the ReadyCharge™ is also compatible with All-In-One's® power banks and most vape batteries, as well as being CA Prop 65 Compliant.
